

## Praktikum 5 Datenbanken2 – Performance Verbesserungen

1. Prüfen Sie, für welche Tabellen und welche Spalte(n) es auf der Datenbank bereits einen Index gibt. Hinweis: Die Systemtabelle user indexes enthält die Metadaten zu allen Indexen Ihres Datenbankschemas:  
`select * from user indexes`

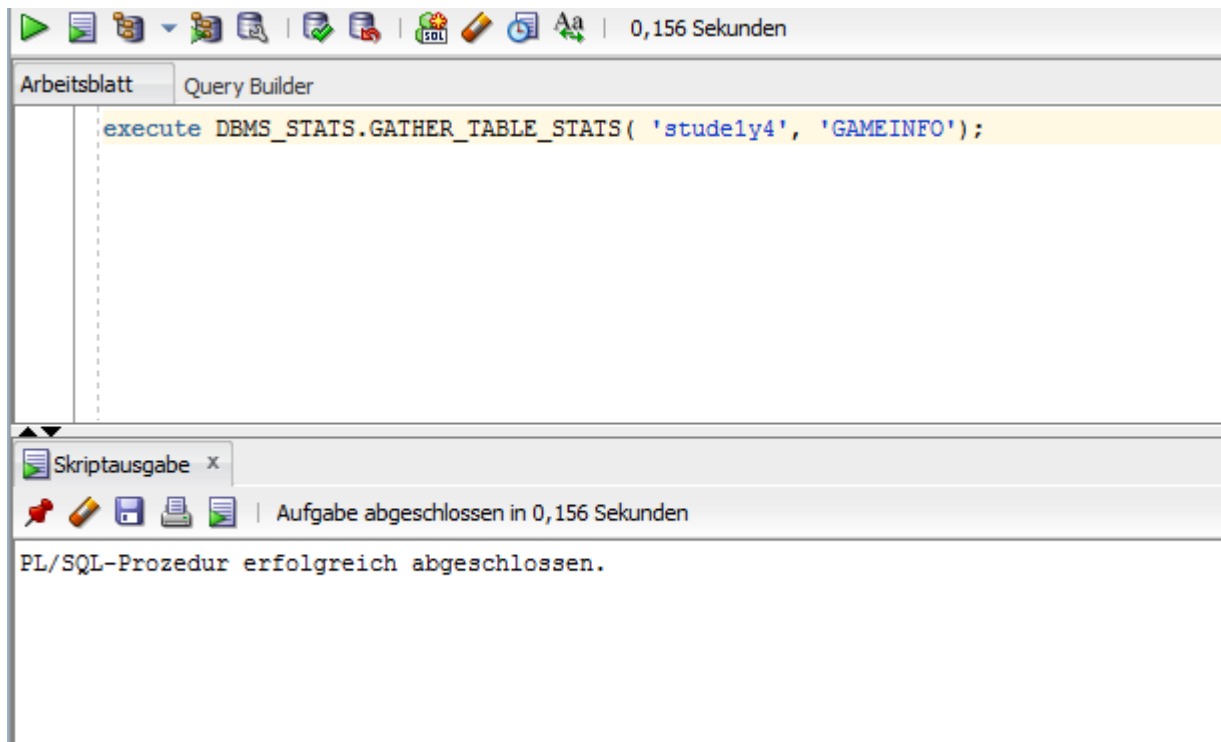

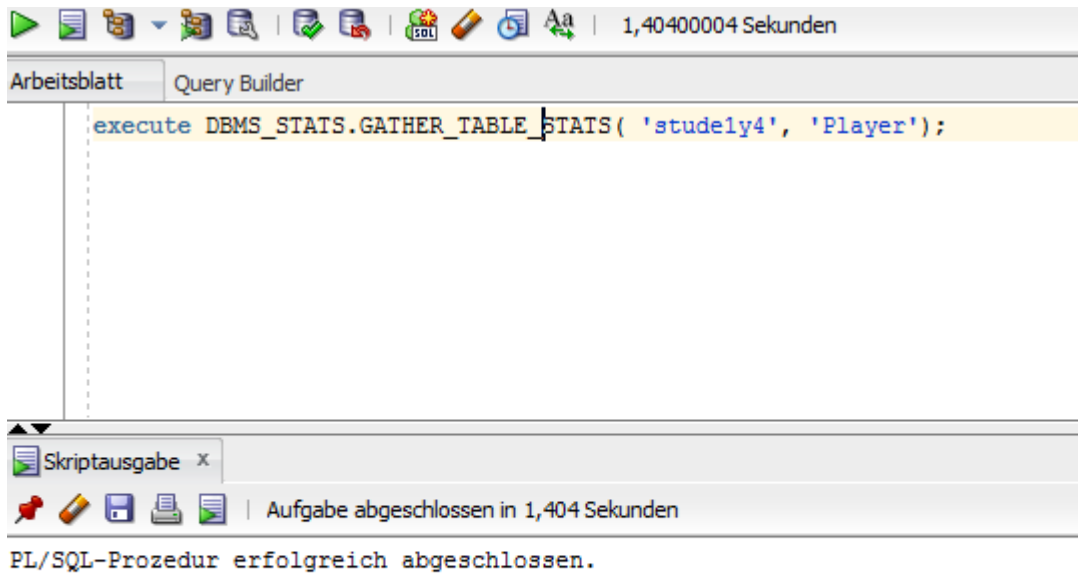

Alle existierenden Indizes sind in der Datei Indizes.txt oder wahlweise Indizes.xml zu finden. Die Ausgliederung in eine andere Datei dient der Übersicht.

2. Prüfen Sie, welchen Wert die Systemtabelle user tables für die Anzahl der Datensätze (num rows) in den Tabellen PLAYER und GAME und die assoziierten Tabellen enthält:  
`select num rows from user tables where table name = '<TABLENAME>';`

3. Die Tabellenstatistik kann explizit mit dem folgenden Prozeduraufruf aktualisiert werden:  
`execute DBMS_STATS.GATHER TABLE STATS( '<schemaname>', '<TABLENAME>');`  
Prüfen Sie nach Ausführung der Prozedur erneut die Anzahl der Zeilen num rows in den o.g. Tabellen.

Arbeitsblatt Query Builder

0,11 Sekunden

```
select num_rows from user_tables where table_name = 'PLAYER';
```

Skriptausgabe x

Aufgabe abgeschlossen in 0,11 Sekunden

NUM_ROWS
0

Arbeitsblatt Query Builder

0,078 Sekunden

```
select num_rows from user_tables where table_name = 'GAMEINFO';
```

Skriptausgabe x

Aufgabe abgeschlossen in 0,078 Sekunden

NUM_ROWS
0

4. Generieren Sie nochmals die Explains für die Queries, die Sie in der Vorbereitung zu diesem Praktikum erstellt haben. Was hat sich geändert? Welche Kosten werden nun für die Ausführung einer Query angegeben?

#### Analyse1:

Worksheet Query Builder

```
SELECT t0.Player_ID, t0.Name FROM GAMEINFO t1 LEFT OUTER JOIN Player t0 ON (t0.Player_ID = t1.PLAYERS_Player_ID)
WHERE ((t1.TIME_START BETWEEN TIMESTAMP '2019-01-11 00:00:00.0' AND TIMESTAMP '2019-01-12 00:00:00.0'))
```

Script Output x Query Result x Explain Plan x

5. Welche Spalten sind sinnvoll mit einem zusätzlichen Index zu belegen, um einen günstigeren Anfrageplan für die Verbundabfragen zu erhalten? Implementieren Sie die entsprechenden Indexe: `create index <indexname> on <tablename> (col1[, col2, ...])` und lassen Sie anschließend die Explains nochmals generieren. Welche Änderungen im Abfrageplan, in den Kosten und in der Ausführungszeit stellen Sie fest? Optimieren Sie, bis Sie für mindestens drei der Abfragen eine wesentliche Verbesserung erreichen.

Für den 1.Query erstellen wir ein Index für die Spalten `PLAYERS_PLAYER_ID` (fk von Tabelle `PLAYER`) und `TIME_START` in der Tabelle `GAMEINFO`.

`create index time_start_gameinfo_index on GAMEINFO (PLAYERS_PLAYER_ID, TIME_START);`

Analyse1 anschließend:

Worksheet Query Builder

```
SELECT t0.Player_ID, t0.Name FROM GAMEINFO t1 LEFT OUTER JOIN Player t0 ON (t0.Player_ID = t1.PLAYERS_Player_ID) WHERE (t1.TIME_START BETWEEN TIMESTAMP '2019-01-11 00:00:00.0' AND TIMESTAMP '2019-01-12 00:00:00.0')
```

Script Output x Query Result x Explain Plan x
